IRJ - June 8 - It has been a day of celebration at the Australian Marine Complex (AMC), in Henderson, where Commerce Minister Simon O'Brien officially opened and launched Matrix Composites and Engineering's new facility—including the largest and most technologically advanced buoyancy production plant with an undercover workshop, spanning around 20,000 square metres.

"The AMC was developed to enhance the opportunities created by the clustering of like-minded companies and industry sectors, and plays an important role in assisting Western Australian businesses to compete internationally and be involved in major resource projects," he told ceremony attendees.

"A world-class company such as Matrix is a great asset to the AMC. The fact that Matrix has chosen the complex as the location for its new facility is testament to the opportunities in the State and the excellent resources the AMC offers.

"Matrix's new facility will help to cater for the growing and increased demands of the offshore, subsea, mining and defence industries in Western Australia."

O'Brien also said that the various awards Matrix has achieved, including best Global Exporter in the inaugural Subsea Energy Australia Awards, means it is "great to see that a Western Australian-based manufacturer is being widely recognised and rewarded for its excellent work."
